ENSG00000187634       258
```

Check the corespondance of colData rows and countData columns.

```
rownames(colData)
```

```
[1] "SRR493366" "SRR493367" "SRR493368" "SRR493369" "SRR493370" "SRR493371"
```

Remove the troublesome first column so we match the metadata

```
counts <- countData[,-1]
```

```
all(rownames(colData) == colnames(counts))
```

```
[1] TRUE
```

Remove zero count genes

We will have rows in `counts` for genes that we cannot say anything about because they have zero expression in the particular tissue we are looking at.

```
head(counts)
```

	SRR493366	SRR493367	SRR493368	SRR493369	SRR493370	SRR493371
ENSG00000186092	0	0	0	0	0	0
ENSG00000279928	0	0	0	0	0	0
ENSG00000279457	23	28	29	29	28	46
ENSG00000278566	0	0	0	0	0	0

ENSG00000187634	124	123	205	207	212	258

If the `rowSums()` is zero then a give gene (i.e. row) has no count data and we should exclude these genes from future consideration

```
to.keep <- rowSums(counts) != 0
cleancounts <- counts[to.keep, ]
```

Q. How many genes do we have left?

```
nrow(cleancounts)
```

```
[1] 15975
```

Setup DESeq object for analysis

```
dds = DESeqDataSetFromMatrix(countData=cleancounts,
                             colData=colData,
                             design= ~condition)
```

```
Warning in DESeqDataSet(se, design = design, ignoreRank): some variables in
design formula are characters, converting to factors
```

Run DESeq analysis

```
dds <- DESeq(dds)
```

```
estimating size factors
```

```
estimating dispersions
```

```
gene-wise dispersion estimates
```

```
mean-dispersion relationship
```

```
final dispersion estimates
```

```
fitting model and testing
```

Extract the results

```
res <- results(dds)
head(res)
```

```

Result visualization

Save my results to a CSV file

```
write.csv(res,file="results.csv")
```

Pathway analysis

```
#pathview(gene.data=foldchanges, pathway.id="hsa04110")
```

Gene Ontology (GO) genesets

```
data(go.sets.hs)
```

```
Warning in data(go.sets.hs): data set 'go.sets.hs' not found
```

```
data(go.subs)
```

```
Warning in data(go.subs): data set 'go.subs' not found
```

```
#gobpres = gage(foldchanges,)
```

```
#head(gobpres$less, 5)
```

Reactome analysis online

We need to make a little file of our significant genes that we can upload to the reactome webpage:

```
sig_genes <- res[res$padj <= 0.05 & !is.na(res$padj), "symbol"]
print(paste("Total number of significant genes:", length(sig_genes)))
```

```
[1] "Total number of significant genes: 8147"
```

```
sig_genes[6]
```

```
ENSG00000188157
         "AGRN"
```

```
write.table(sig_genes, file="significant_genes.txt",
            row.names=FALSE, col.names=FALSE, quote=FALSE)
```

Then, to perform pathway analysis online go to the Reactome website (https://reactome.org/PathwayBrowser/# Select "choose file" to upload your significant gene list. Then, select the parameters "Project to Humans", then click "Analyze".
